DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to a method of preparing a thin film, classified in class 427, subclass 372.2.
 - II. Claims 7-12, drawn to a memory device and capacitor comprising a thin metal oxide film, classified in class 428, subclass 689.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by chemical vapor depositing the thin metal oxide film. While it is noted that claims 7-12 are product-by-process claims and incorporate the some of the same process steps as described in process group I, a product defined by the process by which it can be made is still a product claim (*In re Bridgeford*, 149 USPQ 55 (CCPA 1966)) and can be restricted from the process if the examiner can demonstrate that the product as claimed can be made by another materially different process such as the alternative process described above. See *In re Brown*, 173 U.S.P.Q 685, and *In re Fessmann*, 180 U.S.P.Q. 324, for analysis of weight given to process step recitations in product claims.

Art Unit: 1775

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. **If applicants elect the Group II claims directed to the article (claims 7-12), rejoinder of the non-elected Group II method claims will be considered at the time of the indication of allowable subject matter of all the pending elected claims.**
